

Internal

Mini Blinds Collection

Custom Sizes Are Available

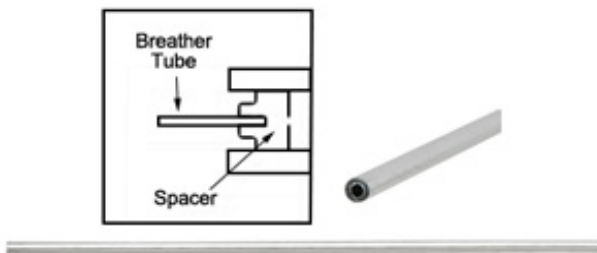

The Internal Mini Blinds are sealed in between two panes of tempered safety glass. The built in blinds offer maximum privacy with minimum care, and the blinds never need dusting or cleaning.

The one easy accessible control allows the blinds to be easily adjusted for the amount of light and privacy.

We will install a 12" long stainless steel thin diameter tube in an upper corner of the I.G. unit to equalize the pressure between the sealed panes.

The tubes with a typical inside diameter of approximately 0.125 inches are typically left open in the field, which allows the IG unit to equalize initially and maintain a generally flat appearance over time.
